					Statement : 13593					
					Message : File CRTOBJDTAN in Z_PC5374 shares access path.					
					Cause : An access path was found that had the same attributes and key fields as the member being created. Member CRTOBJDTAN file CRTOBJDTAN in library Z_PC5374 shares the access path logically owned by member CRTOBJDTAL file CRTOBJDTAL in library Z_PC5374. Because the access path was shared, it is possible that one or more of the following access path attributes were not used from the access path definition for member CRTOBJDTAN: -- Maintenance attribute (MAINT parameter). -- Force attribute (FRCACCPH parameter). -- Recovery attribute (RECOVER parameter). Use the DSPFD command to display the operational attributes of the access path.

MSGID	TYPE	SEV	DATE	TIME	FROM PGM	LIBRARY	INST	TO PGM	LIBRARY	INST
					Override Database File (OVRDBF) command. However, the parameter has been changed to SEQONLY(*NO) because of condition 4 shown below: 1 - The program opened member FLDRPF for output operations only and SEQONLY(*YES) was specified with the default number of records. SEQONLY(*YES) was changed to SEQONLY(*NO) to allow the program to handle duplicate key, conversion mapping, key mapping, and select or omit errors, or both select and omit errors at the time of the output operation. 2 - The program opened the member for other than input or output operations only. 3 - The program opened a logical file member for output operations only and that member is based on more than one physical file member. 4 - The record length plus the feedback information for the member is greater than 32,767 bytes. 5 - The commitment control level of *ALL is active and the member was opened for input operations only, or the commitment control levels of either *ALL, *CS, or *CHG were specified for a distributed file that was opened for input operations only. 6 - The program opened member FLDRPF for output operations only and SEQONLY(*YES) was specified with the default number of records and duplicate key feedback or insert key feedback was requested. SEQONLY(*YES) was changed to SEQONLY(*NO) to allow duplicate key feedback or insert key feedback to be provided on a record by record basis. 7 - The program opened a query member that contains at least one subselect. Either the outermost subselect provided a correlated reference for a subquery or the outermost subselect processed a subquery with an IN, = ANY, or <> ALL subquery predicate operator, which is treated as a correlated reference. Only one record can be retrieved at a time from this type of query. 8 - The file has referential constraints, triggers, or is a distributed file. 9 - The file is a distributed file opened for DSTDTA(*CURRENT). One or more of the nodes in this file have been implemented using join logical file processing. 10 - The file, or a physical file on which the file is based, contains File Link Control DataLink fields. 11 - The file, or a physical file on which the file is based, has a column that is a ROW-BEGIN, ROW-END, TRANSACTION-START-ID, or generated expression. Recovery . . . : For condition 1 or condition 6: -- If changing parameter SEQONLY(*YES) to SEQONLY(*NO) is not acceptable, use the Override Database File (OVRDBF) command to override the parameter SEQONLY(*NO) by specifying SEQONLY(*YES N) where N indicates the number of records. Then try your request again.					
SQL0101	Diagnostic	30	07/25/22	15:20:30.970793	QSQCR TT	QSYS	*STMT	QSQCR TT	QSYS	*STMT
					From module : QSQCR TT From procedure : CLEANUP Statement : 39914 To module : QSQCR TT To procedure : CLEANUP Statement : 39914 Message : SQL statement too long or complex. Cause : The SQL statement is longer than the limit allowed for length or complexity. The reason code is 3. One of the following reason codes indicates the error: 1 - The total number of subselects combined using UNION, EXCEPT, and INTERSECT is greater than 256. 2 - The total number of columns, constants, and operators is greater than the SQL limits. 3 - The sum of the lengths of the non-LOB and XML columns in a select list, table, view definition, or user defined table function is greater than 32766 or the definition contains LOB or XML columns and the sum of the lengths specified on the ALLOCATE clause for varying-length fields and the non-varying field

```

MSGID	TYPE	SEV	DATE	TIME	FROM PGM	LIBRARY	INST	TO PGM	LIBRARY	INST
					lengths is greater than 32740. The maximum length is reduced if any of the columns are varying-length or allow null values. 4 - The total number of subselects referenced in an outer subselect is greater than 256. 5 - The total length of the statement text is greater than 2097152, or the total length of the prepare attribute string text is greater than 65535. 6 - The relative position value specified on the FETCH statement is outside the range of valid values. 7 - A system name could not be generated. Recovery . . . : Simplify the statement or divide the statement up into more than one statement and try the request again. For reason code 7, specify a different name for the table, view, index, or alias.

					Message : Job 458940/DEVDTAYL/ACMSCREATE ended on 07/25/22 at					
					15:20:32; 1.871 seconds used; end code 20 .					
					Cause : Job 458940/DEVDTAYL/ACMSCREATE completed on 07/25/22 at					
					15:20:32 after it used 1.871 seconds processing unit time. The maximum					
					temporary storage used was 82 megabytes. The job had ending code 20. The job					
					ended after 1 routing steps with a secondary ending code of 0. The job					
					ending codes and their meanings are as follows: 0 - The job completed					
					normally. 10 - The job completed normally during controlled ending or					
					controlled subsystem ending. 20 - The job exceeded end severity (ENDSEV job					
					attribute). 30 - The job ended abnormally. 40 - The job ended before					
					becoming active. 50 - The job ended while the job was active. 60 - The					
					subsystem ended abnormally while the job was active. 70 - The system ended					
					abnormally while the job was active. 80 - The job ended (ENDJOBABN command).					
					90 - The job was forced to end after the time limit ended (ENDJOBABN					
					command). Recovery : For more information, see the Work management					
					topic collection in the Systems management category in the IBM i Information					
					Center, http://www.ibm.com/systems/i/infocenter/ .
