					Statement : 13593						
					Message : File CRTOBJDTAN in Z_PC6038 shares access path.						
					Cause : An access path was found that had the same attributes and key fields as the member being created. Member CRTOBJDTAN file CRTOBJDTAN in library Z_PC6038 shares the access path logically owned by member CRTOBJDTAL file CRTOBJDTAL in library Z_PC6038. Because the access path was shared, it is possible that one or more of the following access path attributes were not used from the access path definition for member CRTOBJDTAN: -- Maintenance attribute (MAINT parameter). -- Force attribute (FRCACCPH parameter). -- Recovery attribute (RECOVER parameter). Use the DSPFD command to display the operational attributes of the access path.

					Message : 10400 - RMVLIBLE LIB(Z_PD6105) To module : UTLLIBLST To procedure : UTLLIBLST Statement : 10400 Message : Library Z_PD6105 not removed from the library list. Cause : Library Z_PD6105 is not in the user portion (type USR) of the library list and therefore cannot be removed. Recovery : Display the library list (DSPLIBL command) to determine if the library name specified is correct or if the specified library is in the system portion (type SYS) of the library list. If the library is a product library (type PRD), the library will be removed when the command completes. If the library is in the current library position (type CUR) of the library list, use the CHGCURLIB command to remove the library from the current library position of the library list. If the library name is not correct, change the library name and try the command again.

MSGID	TYPE	SEV	DATE	TIME	FROM PGM	LIBRARY	INST	TO PGM	LIBRARY	INST		
CPF4028	Diagnostic	10	12/01/21	15:15:31.887642	QDBOPEN	QSYS	*STMT	QSQSCHM	QSYS	0B3A		
					Message : 11000 - CALL PGM(QSYS/QCMDEXC) /* The CALL command contains parameters */ From module : QDBOPEN From procedure : SGNRTNOK Statement : 16538 Message : Open of member UTLGUIDD was changed to SEQONLY(*NO). Cause : Member UTLGUIDD file Z_INTSQL_Z in library Z_PC6038 was opened with the SEQONLY(*YES) parameter specified in the program or on the Override Database File (OVRDBF) command. However, the parameter has been changed to SEQONLY(*NO) because of condition 4 shown below: 1 - The program opened member UTLGUIDD for output operations only and SEQONLY(*YES) was specified with the default number of records. SEQONLY(*YES) was changed to SEQONLY(*NO) to allow the program to handle duplicate key, conversion mapping, key mapping, and select or omit errors, or both select and omit errors at the time of the output operation. 2 - The program opened the member for other than input or output operations only. 3 - The program opened a logical file member for output operations only and that member is based on more than one physical file member. 4 - The record length plus the feedback information for the member is greater than 32,767 bytes. 5 - The commitment control level of *ALL is active and the member was opened for input operations only, or the commitment control levels of either *ALL, *CS, or *CHG were specified for a distributed file that was opened for input operations only. 6 - The program opened member UTLGUIDD for output operations only and SEQONLY(*YES) was specified with the default number of records and duplicate key feedback or insert key feedback was requested. SEQONLY(*YES) was changed to SEQONLY(*NO) to allow duplicate key feedback or insert key feedback to be provided on a record by record basis. 7 - The program opened a query member that contains at least one subselect. Either the outermost subselect provided a correlated reference for a subquery or the outermost subselect processed a subquery with an IN, = ANY, or <> ALL subquery predicate operator, which is treated as a correlated reference. Only one record can be retrieved at a time from this type of query. 8 - The file has referential constraints, triggers, or is a distributed file. 9 - The file is a distributed file opened for DSTDTA(*CURRENT). One or more of the nodes in this file have been implemented using join logical file processing. 10 - The file, or a physical file on which the file is based, contains File Link Control DataLink fields. 11 - The file, or a physical file on which the file is based, has a column that is a ROW-BEGIN, ROW-END, TRANSACTION-START-ID, or generated expression. Recovery . . . : For condition 1 or condition 6: -- If changing parameter SEQONLY(*YES) to SEQONLY(*NO) is not acceptable, use the Override Database File (OVRDBF) command to override the parameter SEQONLY(*NO) by specifying SEQONLY(*YES N) where N indicates the number of records. Then try your request again.
